## 1 Prerequisites

This is a *sample* book written in **Markdown**. You can use anything that Pandoc's Markdown supports, e.g., a math equation  $a^2 + b^2 = c^2$ .

The **bookdown** package can be installed from CRAN or Github :

```
install.packages("bookdown")  
# or the development version  
# devtools::install_github("rstudio/bookdown")
```

Remember each Rmd file contains one and only one chapter, and a chapter is defined by the first-level heading #.

To compile this example to PDF, you need XeLaTeX. You are recommended to install TinyTeX (which includes XeLaTeX) : <https://yihui.name/tinytex/>.

## 2 Introduction

You can label chapter and section titles using `{#label}` after them, e.g., we can reference Chapter [2](#). If you do not manually label them, there will be automatic labels anyway, e.g., Chapter [4](#).

Figures and tables with captions will be placed in figure and table environments, respectively.

```
par(mar = c(4, 4, 0.1, 0.1))
plot(pressure, type = "b", pch = 19)
```

Figure 1 – Here is a nice figure!

Reference a figure by its code chunk label with the `fig:` prefix, e.g., see Figure 1. Similarly, you can reference tables generated from `knitr::kable()`, e.g., see Table 1.

```
knitr::kable(
  head(iris, 20), caption = 'Here is a nice table!',
  booktabs = TRUE
)
```

You can write citations, too. For example, we are using the **bookdown** package (Xie, 2018) in this sample book, which was built on top of R Markdown and **knitr** (Xie, 2015).

### 3 Literature

Here is a review of existing methods.

Table 1 – Here is a nice table !

## 4 Methods

We describe our methods in this chapter. And so much more...

## 5 Applications

Some *significant* applications are demonstrated in this chapter.

### 5.1 Example one

### 5.2 Example two

## 6 Final Words

We have finished a nice book.
